

THESIS THEO!

ACTION FIGURE

Survival guide

- You will need to read and understand many (I mean many...) research papers.
- You are expected to be independent and self-motivated but also report, update and “teach” me new things as well
- I will push you to do good work and provide the needed conditions for it.
- I won’t pressure with deadlines, etc.
- You need to know how to program and love (unconditionally) to program.
- You will program (& debug). Quite a lot.
- You will need to be able to “get things to work”.
- It will be mostly hard work but you will be reimbursed by the quality results (most of the time...)
- My research interests are in applied Data Machine/Machine Learning in the fields highlighted in the topics.
- I am open to working on other Data Mining/Machine Learning areas but you have to convince me they are interesting.
